

Security Enhancements Included as Standard

A Platform to Secure your Business

About

We include security enhancements in our standard support package to keep your business safe. These enhancements aim to protect your business from cyber threats using a range of policies set out in this document.

Policies

The following policies are included in our support packages at no additional cost. By default we will install the following:

Logon / Logoff Reports

Ensure all PCs have the required policies turned off and receive scheduled reports detailing when someone has logged in, logged out, locked or unlocked their PC.

Ransomware Protection

Enhanced ransomware protection to isolate the machine from the network should it detect possible ransomware. This then prevents further data being encrypted.

Alert on unencrypted disk

All machines we configure are encrypted. We can however alert on any that may have been configured by a previous supplier that do not have disk encryption.

Additionally, you can request the following to be enabled:

Disable Cloud Storage Devices

Block Access to any of the below cloud storage devices to prevent data loss:

Google Drive | Onedrive | iCloud | iDrive | Dropbox | Backblaze | Sugarsync | Box

Prevent Public Webmail Access

Prevent access to the below common webmail providers to prevent potentially harmful emails being opened from personal email accounts that are outside of your business control:

Gmail | Yahoo | Outlook.com | Hotmail | AOL | iCloud | Windows Live
Google Inbox | Send Inc. | GMX Mail | Proton Mail | Zoho Mail | Lycos | Hushmail
Yandex

Prevent Social Media Access

Prevent access to the below social media platforms to comply with your businesses social media policies:

Facebook | YouTube | Twitter | LinkedIn | Pinerest | Google + | Tumblr | Instagram
Reddit | VK | Flickr | Vine | Meetup | Snapchat | Foursquare | Periscope | Tinder
Whatsapp | Yelp

Disable App Stores

Disable access to common app stores:

Windows | Apple | Google

Restrict administration tools and scripts

Restrict certain administration programs from running which may commonly be used by potentially unwanted or malicious software.
